

MAC OSX

1) Use FTP to upload

Our FTP server is integrated with the website, which means that if you upload your images via FTP, they will also appear in thumbnail on the website.

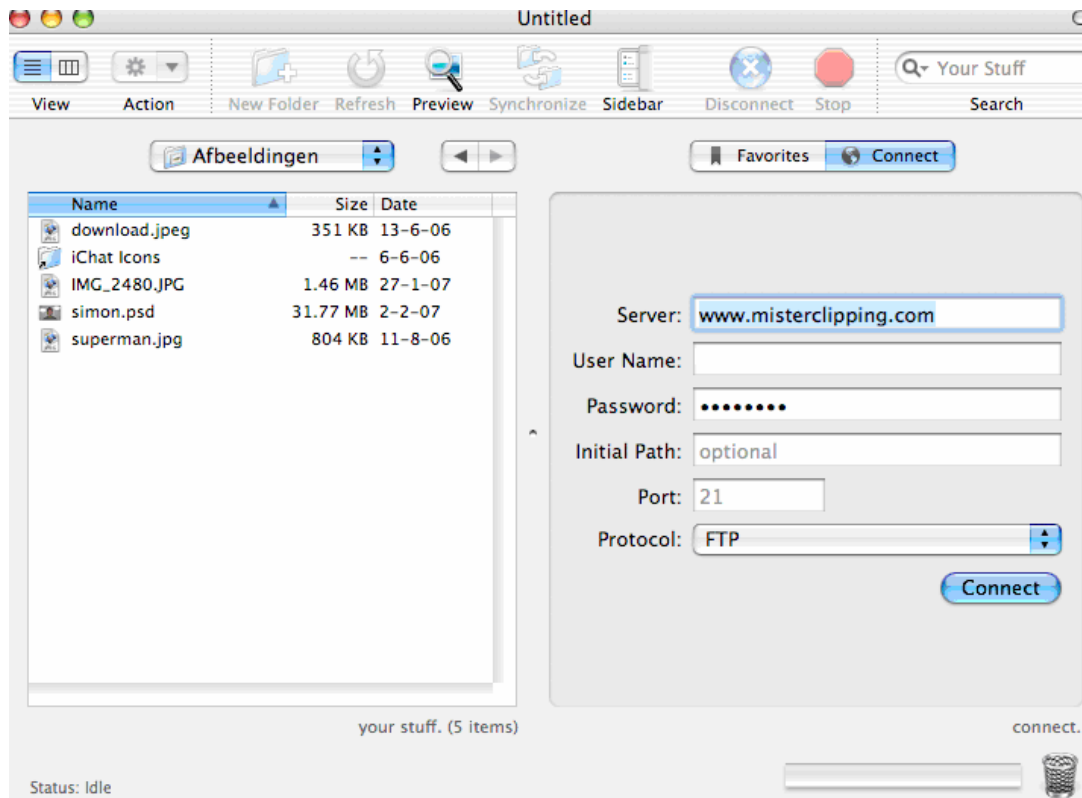

First, you need to go to the website <http://www.misterclipping.com> and log in.

There you can click 'add job' so that a job is automatically created with a job ID number.

To upload via FTP, you can use an FTP client for best performance such as Transmit. Without an FTP client, you may experience difficulties due to browser settings of your computer such as firewalls. You can download from this link: <http://www.panic.com/transmit/>

Open Transmit (or other FTP client) and fill in:

Screenshot 1

Fill in the following information:

Server = www.misterclipping.com

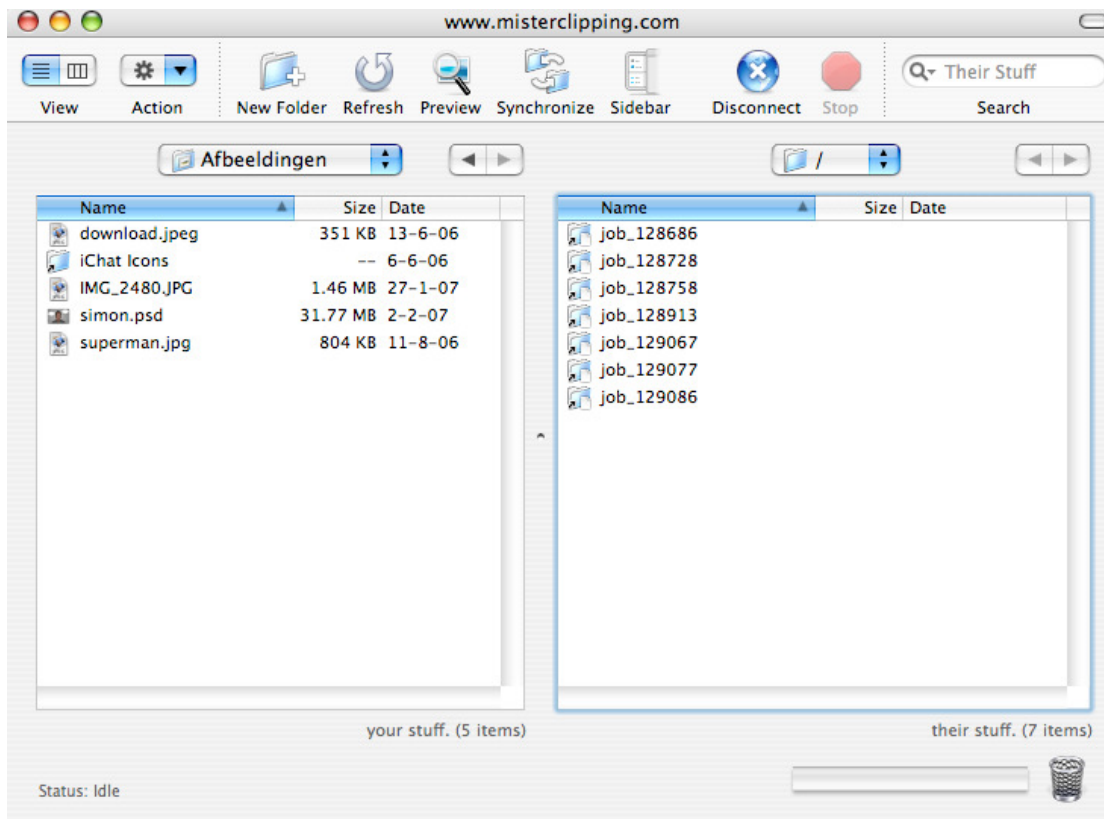

Your username

Your Password

And then 'connect'.

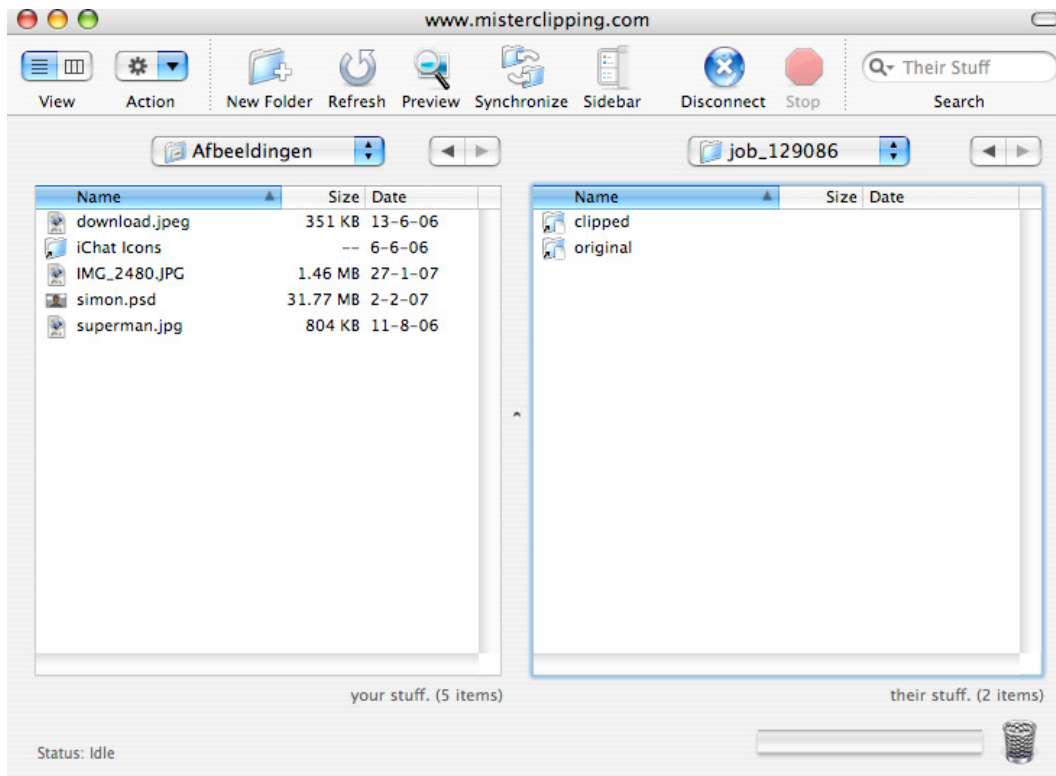

You will find a directory with a job ID number (the one that you created via the website, for example: 129086).

Screenshot 2

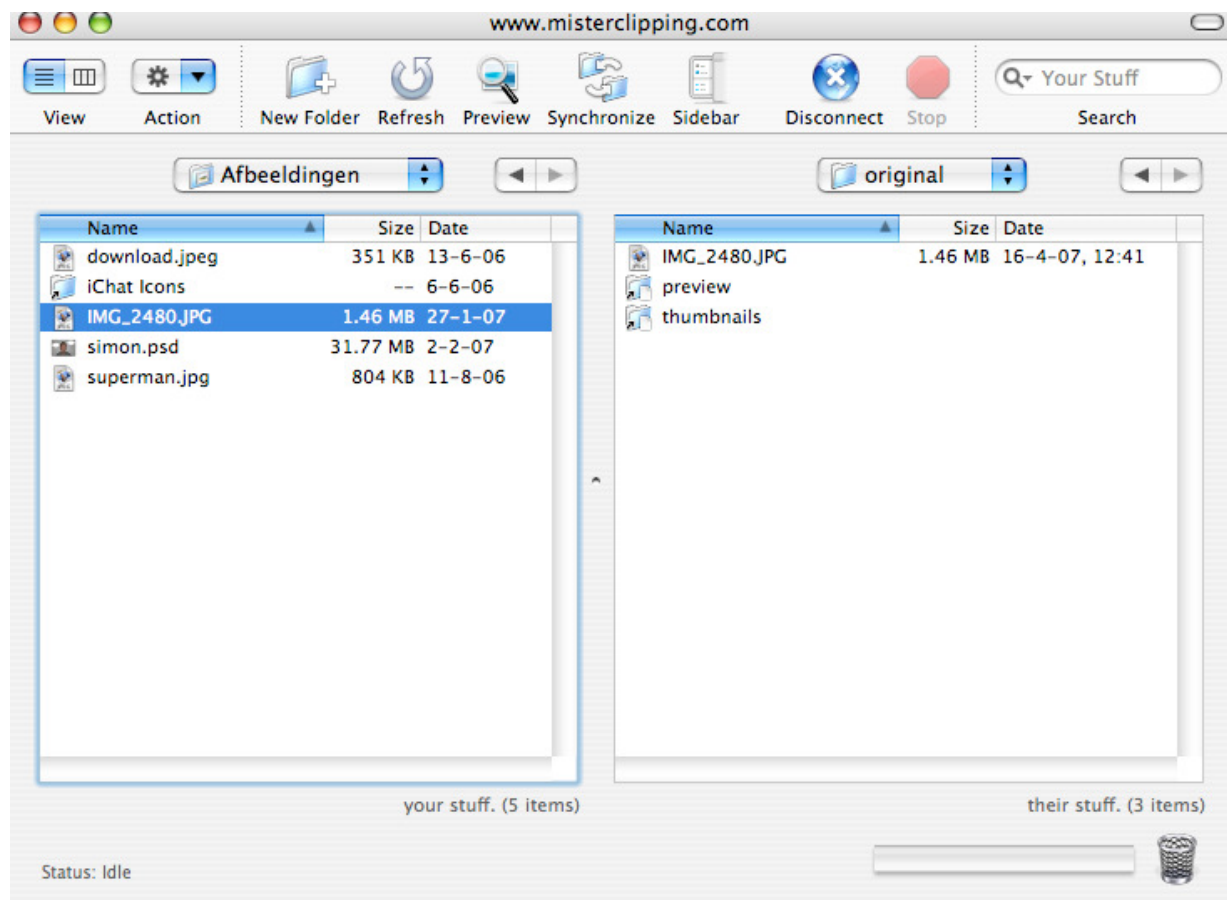

Click on this directory (129086) to see two more directories: 'original' and 'clipped'.

Screenshot 3

Click on directory 'original' and move your files there. You will also see two other directories ('preview' and 'thumbnail') that enable the files to appear on the website in the thumbnail overview.

Screenshot 4

Our application only supports image formats in TIF, JPG, EPS, PSD, which means that it is very important not to move a whole directory (or zipped files) from left to right. On the left side, you need to click on the original directory where the original files are located and then select them all and move to the right side.

When all files are uploaded, you can go back to the website and click refresh or login again. You will see now that the images are appeared in thumbnail. By clicking 'request offer', you confirm that the uploading process is completed. Now, we have received an automatic notification to check, review and quote your new job order.

Hopefully this information is useful for you. Please feel free to contact us if you have any questions or any support with uploading.
